that excites

Nissan LEAF becomes a sparkling Nissan Christmas TREE, powered by regenerative energy

FESTIVE ENERGY FACTS

Nissan LEAF driver regenerates
744kWh of energy, driving
18,000 km per year

This is enough to:

**LIGHT UP
266**

Christmas trees with 700 lights
for an hour of joy

**FIRE UP
297**

Ovens for one hour to cook
your Christmas dinner

**POWER
744**

Televisions for five hours to
watch Christmas movies

THE WONDER OF REGENERATIVE BRAKING.

The **E-Pedal** regenerates energy whilst braking. It works by recycling the energy from the movement of the car during braking or deceleration, which then goes straight back to the battery, extending its range. **B mode** is a driving mode that regenerates energy under braking, with drivers using the traditional brake pedal.
